

Time-of-Incident Phone Use Report

from €500 · Per device · quote

A forensic timeline of phone activity around a specific incident, per device — packaged for insurer or liability use.

// DELIVERABLES

- A forensic timeline of phone activity around a specific incident, per device.
- A report packaged for insurer or liability use.
- Hash-verified acquisition of the device, with chain of custody recorded.
- Correlation of on-device activity to the incident timestamp.

// EXPECTED OUTCOMES

- An evidence-grade answer to whether the phone was in use at the moment it mattered.
- A report an insurer, HR function, or court will accept.

// TIMELINE

Per-device engagement following acquisition; reconstruction and reporting scoped at booking.

// METHOD OF ENGAGEMENT

Every case follows the same backbone, scoped to the matter.

PHASE_01 Triage · scoping

Confirm what's suspected, which evidence sources exist, the legal basis, and a fixed quote.

PHASE_02 Forensic acquisition

Bit-for-bit imaging of devices, mailboxes and logs — hashed (SHA-256), write-blocked. Chain of custody opens here.

PHASE_03 Analysis · reconstruction

Reconstruct what happened and when — separating what the evidence proves from what it merely suggests.

PHASE_04 Reporting · findings

A plain-language account for decision-makers plus an exhibit-referenced technical annex built to survive scrutiny.

PHASE_05 Testimony · referral

As needed: regulator packaging, law-enforcement referral, expert statements and courtroom testimony.
